

CMPT 280 - Using IntelliJ in the SPINKS Labs

A self-guided tutorial.

Mark G. Eramian

University of Saskatchewan

Choose Your Operating System

This document describes how to run and configure IntelliJ on the Spinks lab computers. To begin, click on the name of your operating system, or scroll to the appropriate section of this document.

- Windows
- Linux

Part I

Using IntelliJ on the Windows Lab Computers

Starting IntelliJ on Window

To start IntelliJ on the Windows lab computers:

- click on the start menu and enter IntelliJ in the search box;
- find the IntelliJ application in the search result and click on it to start it.

First Time Startup and Configuration (Windows Labs)

The first time you start IntelliJ, you'll be presented with some dialog boxes with some or all of the following questions:

1. Complete Installation: selection "I do not have a previous version of IntelliJ IDEA" and click OK.
2. Click "Accept" for the privacy policy agreement.
3. IntelliJ IDEA License Activation:
 - Select the "License Server" option
 - Enter `http://geb.usask.ca:8080` for the server location
 - Click "Activate"
4. Customize IntelliJ IDEA: Click "Skip All and Set Defaults" (or go through the screens and select desired options if you really want to).

Finding the Java SDK (Windows Labs)

Sometimes IntelliJ doesn't automatically find the Java SDK installation on the Windows lab machines. If you need to tell IntelliJ where to find it, the location is:

```
C:\Program Files\Zulu\zulu-11\bin
```

(The departmental machines use the Zulu Java SDK)

Part II

Using IntelliJ on Linux Lab Computers

Starting IntelliJ on Linux

There are two ways to start IntelliJ on the Linux lab computers:

- Look in the menus under "Development", subfolder: "IntelliJ".
- or
- Type `/usr/local/bin/idea` at the terminal.

First Time Startup and Configuration (Linux Labs)

The first time you start IntelliJ, you'll be presented with some dialog boxes with some or all of the following questions:

1. Complete Installation: selection "I do not have a previous version of IntelliJ IDEA" and click OK.
2. Click "Accept" for the privacy policy agreement.
3. IntelliJ IDEA License Activation:
 - Select the "License Server" option
 - Enter `http://geb.usask.ca:8080` for the server location
 - Click "Activate"
4. Customize IntelliJ IDEA: Click "Skip All and Set Defaults" (or go through the screens and select desired options if you really want to).

Finding the Java SDK (Linux Labs)

Sometimes IntelliJ doesn't automatically find the Java SDK installation on the Linux lab machines. If you need to tell IntelliJ where to find it, the location is:

```
/lib/jvm/java
```
